📝 Medium

Summary

Java Full Stack Developer with 1.5 years of hands-on experience building scalable, secure enterprise web applications using **Java, Spring Boot, Microservices, and React.js**. Skilled in designing RESTful APIs, implementing JWT/OAuth2-based authentication, and optimizing relational data models with Hibernate/JPA. Recognized with 4 promotions in 1.5 years for strong ownership, rapid learning, and delivery in Agile environments. Comfortable across the stack – from responsive React front ends to secure, high-performance Spring Boot back ends.

Technical Skills

Languages:	Java (Core, Advanced, Multithreading, JVM), JavaScript, TypeScript, SQL
Backend:	Spring Boot, Spring Data JPA, Hibernate, Spring Security (JWT, OAuth2, BCrypt), Microservices Architecture, RESTful APIs
Frontend:	React.js, Redux Toolkit, Next.js, React Hooks, Context API, HTML5, CSS3, Tailwind CSS, Material-UI
Databases:	PostgreSQL (Indexing, JSONB, Query Optimization, Partitioning), MySQL, Redis
Tools & DevOps:	Git, GitHub Actions, Docker, Kubernetes, CI/CD, Google Cloud Platform (GCP)
Testing & Practices:	JUnit, Mockito, Agile/Scrum, SOLID Design Patterns, Data Structures & Algorithms

Experience

Green Wood

Java Full Stack Developer

- Promoted 4 times within 1.5 years for consistent delivery, ownership, and rapid technical growth across full-stack projects.
- Designed and built RESTful APIs and microservices-based backend features using Java and Spring Boot, integrated with React.js front-end applications.
- Implemented secure authentication and role-based authorization using Spring Security (JWT, OAuth2, BCrypt password encoding).
- Optimized PostgreSQL queries and data models using Hibernate/JPA to improve application performance and reliability.
- Collaborated with cross-functional teams (Product, QA, DevOps) in an Agile/Scrum environment on code reviews and technical design.

Projects

Enterprise Document Generation Platform

Spring Boot, Spring Security, JWT, iText, (GitHub)

- Engineered a secure, full-stack document automation platform using Spring Boot and iText, enabling programmatic generation of professional, formatted PDF documents (offer letters, certificates, reports) from structured input data.
- Implemented JWT-based stateless authentication with a custom Spring Security filter chain, ensuring token-validated, role-secure access to all API endpoints for multi-user enterprise use.
- Designed a normalized relational data model using Hibernate/JPA with proper entity relationships (**@OneToMany/@ManyToOne**) to represent complex, hierarchical business data.
- Architected the generation engine to be template-agnostic and reusable, allowing the same data-to-PDF pipeline to be repurposed across HR letters, insurance documents, and invoices.

Plate Plan Pro – Recipe Discovery Platform

React.js, Spring Boot, PostgreSQL, REST APIs (GitHub)

- Built a full-stack recipe discovery application integrating TheMealDB API, letting users browse recipes, watch tutorial videos, and save favorites for later.
- Implemented secure Sign Up/Login with a Spring Boot backend and PostgreSQL database, encrypting passwords with BCrypt hashing and verifying credentials during authentication.
- Improved performance with code splitting and lazy loading, and replaced spinners with skeleton loading screens for a smoother user experience.

KatukuriXpress – E-Commerce Web Application

React.js, REST API Integration, JavaScript (ES6+) (GitHub) | (Live Demo)

- Developed a responsive e-commerce web app integrating the DummyJSON Products API, with user registration/login and a browsable catalog of 100+ products.
- Implemented client-side pagination and lazy loading to efficiently render a 100+ item catalog and reduce initial bundle size.
- Built a reusable, component-based architecture with React Hooks to minimize unnecessary API calls.

Education

Vaagdevi College of Engineering

2023 – 2025

Master of Computer Applications (M.C.A.)

Viveka Vardhini Degree & PG College

2020 – 2023

Bachelor of Science

GPA: 8.2
